Problem Domain : **NITC Permission Management System**

Problem Statement: **To automate the process of taking permission for several events like workshop, seminar, technical events, cultural events with the help of web technology.**

In NITC typically many events like workshop, seminar, technical events, cultural events, etc.. are organized by students. For organizing these events, students have to get permission from respective authorities. Now for getting these types of approval students have to write applications and need to visit the respective authorities to get signed on these applications which is an onerous task. It is also possible that some other events are on the same day and some classrooms or laboratories may coincide. For authorities also it is strenuous to maintain the records to avoid the possible clashes of timing and places. Students also need to know which other events are happening on the same day. To overcome these difficulties we are planning to make these process online mode which will eliminate the pen-paper based application process and help students and authorities in taking permission for the various activities easily and within a very short amount of time.
